TX360 TECHNOLOGY PARTNERING

TX360 offers a wide variety of methods for integrating with other systems. Integrated information can be displayed on visual dashboards and distributed through Smart Alerting. An API is available to partners, as well as custom integration options for more advanced development.

NATIVE DATA INTEGRATIONS

RSS/Atom: Web standard for syndicated feeds such as news, internal press, industry reports, blogs, etc.

Common Alerting Protocol (CAP): Structured, interoperable public safety messaging standard from OASIS.

Geospatial: GeoRSS/KML, GeoJson, GeoCSV and other XML formats with geospatial data for custom mapping.

URLs: Web links for quick access to online resources and incorporating hosted images such as weather radar.
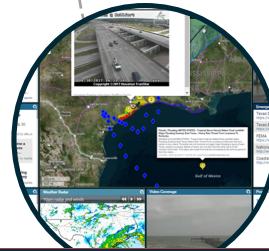

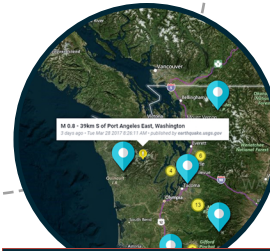

SYSTEM TOOLS

Email/Mobile Interface: Internal and external email streams can be used to securely exchange information and send/receive alerts.

Manual Alerts: Publish alerts and updates manually within TX360 with location, attributes, and more.

Social Media: Active Channel integrations with Twitter, YouTube, Reddit, and other social media.
